

# TAYSIR HOTEL

## 1. add\_guest

```
CREATE OR REPLACE PROCEDURE add_guest(guest_id number, fname varchar2, lname varchar2, id_number varchar2, city varchar2, street_house_number varchar2)
```

### Parameters:

**guest\_id** **number**,  
**fname** **varchar2**,  
**lname** **varchar2**,  
**id\_number** **varchar2**,  
**city** **varchar2**,  
**ulica\_nr\_domu** **varchar2**

The procedure used to add a new guest to the database.

## 2. write\_free\_rooms

```
CREATE OR REPLACE PROCEDURE write_free_rooms (d1 DATE, d2 DATE)
```

### Parameters:

d1 DATE,  
d2 DATE

**Procedure for listing empty rooms between dates d\ and dY.**

## 3. find\_guest\_by\_id

```
CREATE OR REPLACE FUNCTION find_guest_by_id(fid_number  
varchar2)
```

### Parameters:

fid\_number varchar2

**A function to find the guest by ID number returning the guest id.**

## 4. add\_reservations

```
CREATE OR REPLACE PROCEDURE add_reservations(fid_number  
varchar2, id_room number, status varchar2, start_date  
DATE, end_date DATE, note varchar2)
```

### Parameters:

add\_reservations varchar2,  
fid\_number number,  
status varchar2,  
start\_date DATE,  
end\_date DATE,  
note varchar2

**The procedure used to add reservations to the database.**

hotel\_request

```
CREATE OR REPLACE PROCEDURE
hotel_request(fid_number varchar2,
arrival_date date)
```

**Parameters:**

fid\_number varchar2,  
arrival\_date date

**Procedure for entering the date of the guest's arrival at the hotel.**

## 6. cancel\_reservations

```
CREATE OR REPLACE PROCEDURE cancel_reservations(id_number
varchar2)
```

**Parameters:**

id\_number varchar2

**Procedure for deleting reservations from the database.**

## 7. diff\_date

```
CREATE OR REPLACE FUNCTION diff_date(guest_id\ number)
```

**Parameters:**

guest\_id\ number

**This function returns the number of days the guest stayed at the hotel.**

## 8. bill

```
CREATE OR REPLACE PROCEDURE bill(fid_number varchar2,
fadditional_cost number)
```

**Parameters:**

fid\_number varchar2,  
fadditional\_cost number

**Procedure for calculating the invoice for the guest.**

## 9. late\_person

```
CREATE OR REPLACE PROCEDURE late_person
```

**Procedure for returning all persons who have made reservations and have not yet reported to the hotel.**

10.      staying\_at\_hotel      ما يشتغل للآن

```
CREATE OR REPLACE PROCEDURE staying_at_hotel
```

**Procedure for inserting data into the Summary table.**

11.      delete\_old\_reservations

```
CREATE OR REPLACE PROCEDURE delete_old_reservations
```

**Procedure removing all reservations older than ٥ years.**

13.      field\_update      ما يشتغل للآن

```
CREATE OR REPLACE TRIGGER field_update
```

**Trigger updating fields: how many times and how long in the Summary table**
